HDPE Tank Model : DD750

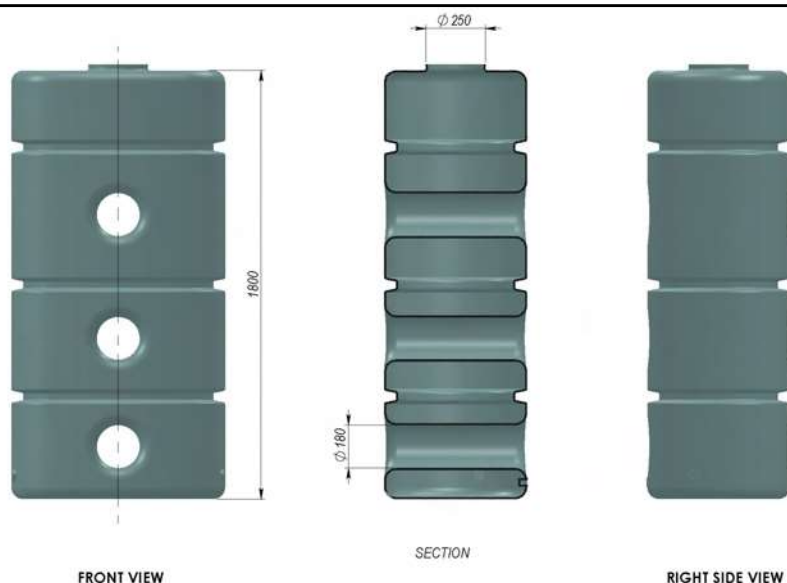

UV Resistant HDPE / 8mm thick / 40kg

Wall mount Rainwater Tank

The DD750 Wall Tank is a rainwater storage tank for domestic use. It has a capacity of 750 Litres and is designed to fit close to a backing wall. With a small footprint, it is space saving and blends well with the exterior of a house.

The tank is strong and durable, retains its shape well when filled full or empty, able to withstand harsh weathering conditions and maintains constant water quality.

Steel safety brackets fix the top of the tank securely to the wall and prevent the tank from toppling over.

Features :

The tank is made from durable HDPE and is UV resistant. It is manufactured by rotational moulding process to get seamless and even wall thickness.

Water outlets are available on all 4 sides of the tank and are pre-threaded.

Water inlet can be positioned on flat surfaces anywhere near the top of the tank by cutting holes using a hole saw.

The modular design allows 2 or more tanks to be connected together.
